**PRODUCT DESCRIPTION**

ARclad® 2116A-11 is a 1/16” (1.6 mm) white, closed cell, cross linked polyethylene foam, coated both sides with a rubber based adhesive. A kraft paper release liner is utilized.

**FEATURES**

- High density 1/16” closed cell polyethylene foam
- High performance rubber based adhesive
- Densified kraft liner

**BENEFITS**

- Instant bonding (no cure time) to practically any surface
- No solvents, no mess, no clean up
- Die cuttable
- Fast, easy application

**PRODUCT APPLICATIONS**

Suggested for mounting wire harness clips, reflectors, molded plastics, mirrors, signs, metals and wall displays where irregular or uneven surfaces are encountered. It is necessary, as with all pressure-sensitive tapes, that the surface to which the tape is to be applied be clean and dry. Users should assure the product meets the specific needs of their application(s). Adhesives Research can tailor the product to meet the needs of specific applications as requested by customers.

STORAGE AND SHELF LIFE

Unconverted product should be stored at 70°F ± 20°F (21°C ± 11°C) and 50% ± 20% relative humidity, out of direct sunlight. The shelf life of the product is not to exceed one year from date of manufacture.

SERVICE TEMPERATURE RANGE

Minimum Application Temperature - 50°F (10°C)
Maximum Intermittent Operating Temperature - 125°F (54°C)

Note: The information contained on this data sheet is based upon test results of limited quantities of this material and may be modified by Adhesives Research following additional production experience and evaluation. This data should not be used in preparing specifications. Products identified as developmental may be subject to modification by Adhesives Research, Inc.

APPLICATION AND STORAGE OF PRESSURE-SENSITIVE ADHESIVE TAPES

Pressure-sensitive adhesive tapes function as a mechanical product; however, the adhesive itself is a chemical composition that can be sensitive to environmental conditions. A purchaser of pressure-sensitive adhesive products should be aware of the shelf life of each product and not purchase more than it can use before the expiration date. Shipping and storage conditions affect shelf life. The optimum storage temperature is 70°F (21°C). Cool, dry storage is recommended.

For best results...

1) The surfaces you wish to bond should be clean and free of oil, moisture and dust. If the surface temperature is below 40°F, it may be difficult to achieve a proper bond.
2) Do not use a pressure-sensitive adhesive product where it will be exposed to temperatures lower or higher than those designed for each product. Heat can destroy the effectiveness of the bond and extreme cold can cause the adhesive to harden and not adhere properly.
3) When the tape is applied, use firm hand or lamination pressure to achieve contact between the adhesive and the surface to which it is applied. Hand rollers or nip rollers may be needed for certain products or applications.
