PRODUCT DESCRIPTION

ARcare® 90366 is a self wound transfer adhesive, featuring an electrically conductive pressure-sensitive adhesive. The adhesive is protected by a clear double coated release liner.

FEATURES

- Highly conductive adhesive
- Conductivity on the Z axis

BENEFITS

- Low volume resistance
- Robust product application

PRODUCT APPLICATIONS

Suggested for bonding, laminating and assembly of electrode and defibrillation applications. All pressure-sensitive tapes require an application surface that is clean and dry. Users should assure the product meets the specific needs of their application(s). Adhesives Research can tailor the product to meet the needs of specific applications as requested by customers.

SAFETY DATA

EC-2 is an electrically conductive acrylic adhesive. The adhesive has passed cytotoxicity testing conducted by an independent laboratory. Additional safety information is available by accessing our Drug Master Files or Device Master Files.

STORAGE

Unconverted product should be stored at 70 °F ± 20 °F (21 °C) and 50% ± 20% relative humidity, out of direct sun light.

APPLICATION AND STORAGE OF PRESSURE-SENSITIVE ADHESIVE TAPES
Pressure-sensitive adhesive tapes function as a mechanical product; however, the adhesive itself is a chemical composition that can be sensitive to environmental conditions. A purchaser of pressure-sensitive adhesive products should be aware of the shelf life of each product and not purchase more than it can use before the expiration date. Shipping and storage conditions affect shelf life. The optimum storage temperature is 70 °F (21 °C). Cool, dry storage is recommended.

For best results...
1) The surfaces you wish to bond should be clean and free of oil, moisture and dust. If the surface temperature is below 40°F; it may be difficult to achieve a proper bond.
2) Do not use a pressure-sensitive adhesive product where it will be exposed to temperatures lower or higher than those designated for each product. Heat can destroy the effectiveness of the bond and extreme cold can cause the adhesive to harden and not adhere properly.
3) When the tape is applied, use firm hand or laminating pressure to achieve contact between the adhesive and the surface to which it is applied. Hand rollers or nip rollers may be needed for certain products or applications.
